General Motors Approves DeBeer 900+ by Valspar Automotive

General Motors, a global leader in vehicle manufacturing including well-known makes such as Buick, Cadillac, Chevrolet, GMC, Holden, Isuzu, Opel and Vauxhall, has given a global approval for De Beer 900+ system by Valspar Automotive. This approval is based on the GM Specification GMW15406M. All countries where General Motors vehicles are manufactured, sold or repaired can now utilize the De Beer 900+ series for General Motors warranty work.

“General Motors performed meticulous and thorough testing of the 900+ product for global use and we are excited to report a successful approval. This approval shows Valspar Automotive's continued dedication to our customers and our products. Valspar's vision is to be the best coatings company in the world; this is another step in demonstrating our commitment to excellence in the coatings industry, said Carl Wierks, Global Vice President of Valspar Automotive.”

DeBeer Waterbase Technology - the way of the future

Car Refinishing is becoming an increasingly specialised branch of work. Car coating manufacturers and users are faced with the ever-increasing demands of technological developments, environmental measures and complex colour combinations. The DeBeer VOC compliant product range certainly offers you an effective, user-friendly and comprehensive paint system.

Car Refinish businesses find that switching to VOC (Volatile organic compound) compliant 900 series basecoat is comparatively easy and in a lot of cases requires minimal investment. The system can be integrated into full down draft spray booths, however, experience shows that to get the full benefits and efficiencies from a water based system additional drying apparatus or blow drying systems dramatically shorten drying times.

The Water Base 900 series is one of the most **user-friendly** water based systems currently available.

Applying the Water Base 900 Series

is just as simple as applying any customary basic solvent based system. Application is fast and simple, and blending is very straight forward and simple. Unlike some other water based systems on the market the base coat can be repaired easily if you have a problem before clear coat is applied. By using Water Base 900 Series you can easily reduce your application times.

Some of the benefits are

- Waterbase 900 series is an entirely 'non stirring' system
- Holds more pigment than solvent, achieving better paint coverage
- Excellent coverage with minimal coats, reducing application times
- Better colour accuracy, especially to modern OEM colours
- Significantly lower emissions of VOC's (Volatile Organic Compounds)
- Waterborne paints are non hazardous and non flammable, resulting in a safer workplace for employees

Local News

Linkup Paints now Supplying Hempel

At Linkup Paints we are always looking for new products or brands that can provide benefit to our customers.

When we had the opportunity to become a distributor of Hempel products, it was an opportunity that we couldn't let pass by.

Hempel is one of the world's largest paint coatings manufacturers and specialises in Protective and Marine coatings. The products are of the highest quality and proved themselves having been in the New Zealand market for many years.

Hempel have a great range of anti-fouls for the New Zealand market and have already proved very popular since we have been marketing the Hempel range of products.

So if you have some maintenance or a project coming up on your boat, give us a call and we can provide the correct advice and products.
