HAMILTON

May / June 2022

Paint Smart Group are proud suppliers of world-leading Spectratek Infra-Red and UV LED lamps

AMH Canada are manufacturers and suppliers of Infrared and UV LED curing lamps. Working from its state of the art research and testing facilities in Canada, they have created world-leading paint curing equipment for the automotive industry. AMH Canada is committed to developing the highest quality products and invests in extensive research, development, and testing. Ongoing research ensures that products will continue to be developed to effectively meet the needs of auto body shops today and in the future.

Spectratek IR

Many years of experience in the automotive paint field and a high level of technical expertise in Short Wave Infra-Red technology as it applies to the automotive industry. Spectratek IR assists in producing the highest quality paint job in the least amount of time. Work is done at a lower cost while conforming to environmental regulations. It cures on any substrate, and cures body filler, primer or topcoat in just minutes. Short wave infrared cures from the inside-out to eliminate "skinning", haze, or bubbles. Spectratek IR has a rapid, modulated ramp-up temperature that delivers maximum heat transfer with maximum control. The equipment is fitted with automatic timed shut-off, which reduces the chance of paint finish damage due to overheating.

Spectratek UV LED

The use of UV-coatings in the car body repair industry has many advantages. The primary advantage of curing finishes with ultraviolet lies with the speed in which the final product can be readied for delivery. In addition to speeding up production, UV can also reduce errors and flaws by reducing dust and airborne objects in the coating because the coating dries so fast. Curing time ranges from 20-30 seconds depending on the product and size of the curing area. The key benefits are speed, environmental friendliness, improved physical properties and less floor space needed etc.

Benefits include

- Very long bulb lifetime (up to 35,000 hours)
- Up to 70% energy saving
- Large uniform curing area
- Safe to use with non-hazardous chemicals and only UVA radiation being emitted
- No warm up time

Spectratek covers a whole range of products, from a small mobile device for spot repair to entire track systems that retrofit onto your booth. The track system can incorporate IR and UV LED on the same track for further versatility within your shop.

Spectratek is acknowledged by all major paint brands. It has fully equipped digital devices, with distance measurement and temperature controller.

For further information, contact your Paint Smart rep.

Control Powder

- No masking required
- Clog-free sponge
- Easy to apply
- Instant defect detection
- Full coverage of sanded area
- No dry time required as the product contains no solvents
- Perfect for both wet and dry sanding
