

TUESDAY TECH TIP

DBNZ Tech Tip Of The Week

Colour Tools

The Let Down Fan Deck consists of 70 toner pages in alphanumeric order so they're easy to find. The colour chips indicate:

1. The toner at 100%
2. The toner in combination with black (*various mixing ratios*)
3. The toner in combination with white (*various mixing ratios*)
4. Gray shade scale
5. Effect toners

For more information contact your local DeBeer Technical Representative.

DeBeer Let Down Toner Fan Decks

Understanding the Colour Tools that are available today is crucial in installing confidence, speed and accuracy as part of the skill set of a great Automotive Refinisher

The Let Down Fan Decks have been designed to help with understanding colour families, colour direction and flop appearance.

The Let Down Fan Deck provides you with detailed information on each toner within the DeBeer system. It shows how a toner moves and mixes with other toners. The fan deck contains colour chips for each toner in the system, with draw-down chips to show a variety of practical attributes of the colour.

Please note: These Let Down Fan Decks were produced before the recent introduction of DeBeer 9283 Metallic Bright Orange, 9255 Transparent Red Orange, 59-21 Mysterious Arctic Glass and 59-22 Mysterious Desert Glass toners. Therefore unfortunately, these toners are not included in the relevant fan decks.
