Breathable Quality Air in Your Spray Booth

With the changes coming into effect with the new Health & Safety Reform Bill this year the need couldn't be greater for ensuring that everyone spraying catalysed products is protected as much as possible from the direct physical exposure of atomised paint product.

Everyone is aware that air fed respirators must be worn when spraying these products but not many people are aware of what is required to supply **CLEAN, FILTERED AIR** to the masks.

We can help you with this....

If you have ever drained a compressor you will be well aware of the filthy water and oil that is a by-product of the compressor and of which a fair amount can end up in the spray/breathing lines. This in itself is a health hazard.

In brief - air supplied from a compressor, in order for it to be clean & safe for the painter to breathe, must go through 3 final stages of filtration.

- Stage 1.** The air passes through a water trap which will filter water & solid particles down to 5 microns in size. (Note: a water trap does not stop oil)
- Stage 2.** Then through a coalescent or oil removing filter which will remove oil and remaining solids down to 0.01 microns.
- Stage 3.** Activated carbon filter, either located on the main filter unit or the painters air-fed belt removes the last contaminate, dry fume.

The Spray Booth Air-hose

Often overlooked is the importance of the air-hose which goes from the filter unit to the painter's belt. This air-hose must also be of breathable quality. A standard rubber airline will over time degrade split & crumble on the inside and the flow of air will push that residue towards the painters mask. **The hose that must be used and which is manufactured to breathable standards will have marked on it "meets AS/NZS 1716", it is normally yellow in colour.**

Maintenance Schedule for filter cleaning or element replacement.

Most shops may put the correct filtration in place but then forget about ever servicing the filters. It would be prudent for a shop to have a maintenance schedule for their filtration units so that they would be able to show any inspection body (e.g. worksafe) that ongoing maintenance is carried out at the recommended service intervals.

How often should the servicing be done? At least at the manufactures recommended intervals, or sooner. How long the filters last will largely depend on the quality of the air being delivered by the compressor.

SPECIAL DEAL

SUPER SPECIALS ON

FINIXA®
paint processing products

Finixa Bucket with Spout

12 litre bucket with handy pour spout

ONLY
11.00

Finixa All in One Car Shampoo

Excellent cleaning power with top wax included. Almost completely self drying and ensures a top gloss when washing the vehicle. Finixa All in One Car Shampoo is also completely bio-degradable.

ONLY
39.95
5 Litre

Finixa Jumbo Sponge

Choice out of two excellent sponges: soft springy artificial material, highly water-absorbent, with or without microfiber skin resulting in easy dirt removal without leaving scratches.

Jumbo Sponge \$4.30
Micro Fibre Sponge \$7.50

Finixa Foam Hand Applicator

Black soft open foam pad with handgrip: can be used to polish or wax manually.

ONLY
15.95

Finixa Spray Wax

A unique formula that adds gloss and protection. Can be used directly on a dry panel and can also be used on a wet washed car to improve drying in combination with microfiber towels. Finixa Spray Wax is silicone free, so is safe to use in the body shop.

Receive a 500ml trigger sprayer **FREE**

ONLY
45.00
5 Litre

Finixa Soft Silicone Blade

Soft silicone blade for removing water fast and easily after washing down a vehicle, without harming the paintwork. Finixa flexible silicone blade moulds to the shape of the surface and virtually eliminates messy towels and chamois.

ONLY
26.90

Finixa Black Tyre Gel

Finixa black tyre gel can be applied with the POL 33 foam pad to make tires deep black and leaving them shining for a very long time. Also suitable to refurbish non painted plastic parts.

ONLY
28.00

ONLY
6.00

Paint Smart Spill Kits

Exclusive to Paint Smart Group members and essential for any business handling chemicals, paints and solvents

Spill Kit #1 (Large) \$338.00
Spill Kit #2 (Medium) \$105.00
Spill Kit #3 (Small) \$65.00

Finixa Dust Control

The original and most efficient formula for suppressing dust circulation inside a spray booth. Dust Control ionises the dust so it is being drawn together in clusters which makes it too heavy to circulate in the air. Mist on economically with pressure sprayer. Finixa Dust Control is bio-degradable. One litre treats approximately 100m². Activation time 5 to 10 working days.

ONLY
59.00
5 Litre

Finixa Carbine Protect Peelable Booth Coating

A white peelable coating for the protection of spray booth walls against overspray. Apply with a spray gun (2.5mm setup) in 2 to 3 coats. After contamination it is best to put an extra coat on and repeat, this will save time and makes it easier to peel of the coating in one piece once it has reached a certain thickness. Biodegradable.

ONLY
265.00
17 Litre

U-POL Fine Filler Special

U-POL Hot Shot Fine Filler is a very soft, super fine paste that is easily spread and provides the perfect surface for painting.

Stucchi Extraction

Sprayshop Equipment are very pleased to be able to bring to the NZ market one of Europe's most respected dustless dri-sanding extraction brands, STUCCHI from Italy.

The technology behind dustless dri-sanding including in the refinish market is changing from the old "vacuum and bag" system to the new and much more efficient "turbine dust extraction" (bag-less).

Some of the key benefits of turbine extraction are

- More efficient extraction of dust, 99%
- Less maintenance (no bags to buy and replace)
- Much greater warranty period (5 years for Stucchi units).

Sprayshop Equipment are introducing the Stucchi ST1-C, a one man turbine extraction unit. The ST1-C features the following

- Compact "steel" body construction on solid rubber caster wheels, only 32kg, physical size, 450 x 450 x 800.
- 1300 w high efficiency quiet electric motor.
- Automatic internal filter cleaning function at regular 15min intervals.
- Manual and automatic suction start.
- Manual adjustment of suction.
- Multi tool adaption, any brand of sander or block.
- 5m pneumatic sander hose.

Note the ST1-C does not include the sanders or accessories pictured.

Sprayshop Equipment, the Paintsmart Group and Atlas Copco

Sprayshop Equipment and the Paintsmart Group are proud to announce a new partnership with the World Leader in compressed air and pneumatic systems, Atlas Copco.

Atlas Copco have an extensive and unsurpassed range of **compressed air solutions** for every level of refinish and industrial coating applications, suitable for the one man operator through to the largest of workshops and factories. A key factor is that Atlas Copco have service and installation technicians throughout the length of NZ.

By partnering with Sprayshop Equipment and the Paintsmart group, Atlas Copco see an opportunity to gain more of a market presence in the refinish industry. In turn Sprayshop Equipment and the Paintsmart group now have the ability and confidence to offer their clients the best compressed air solutions in the world.

For further information, please contact
Bruce Barnet, DBNZ Equipment Specialist, phone 027 399-9021.

Linkup recently held a DeBeer Waterbase 900 Series trade evening at Weltec Petone. The evening was well supported by Panel shops throughout the region, during the course of the evening it gave them the opportunity to pick up the gun and have a go.

Many thanks to Dean at Weltec for opening up the doors and giving the local Trade the opportunity to view your new refurbished facility.
